Education

B.Tech Computer Science and Engineering , Bennett University — September 2021 — May 2025
GPA: 9.00/10

Skills

Languages	Python, C++, HTML, CSS, JavaScript
Frameworks	Power-BI, Adv.Excel, Spring Boot
Databases	My-SQL
Tools	Visual Studio Code, Git, Kaggle, GitHub, GoogleCollab, BitBucket, Jira
CourseWork	Operating systems, Data Structures and Algorithms| | Data Science | | Machine Learning | | Deep Learning

Professional Experience

Project Management and Automation Intern(Project Management , Data Automation , Reporting , Adv.Excel)

Evalueserve

March 2025 – Present

- **Automated Timesheet Defaulter & Missing Hours Detection:** Developed a Python-based script to parse Excel files and identify employees with missing timesheets or incomplete hours using pandas and conditional filtering logic.
- **Built Dynamic UI & Email Trigger System:** Designed a Tkinter GUI to upload employee data, apply exclusion lists, and trigger customized Outlook emails with employee and RM-specific CC logic using win32com.client.
- **Reduced Manual Processing Time:** Streamlined a 3-hour manual workflow to just 30 minutes by automating email communication, improving weekly compliance and reducing human error across 3000+ employee records.

Technology Apprentice(Spring Boot , Angular, Python , Bitbucket , Jira)

Morgan Stanley

July 2024 – January 2025

- Developed a flow visualization tool using HTML & Mermaid to trace SDP document flows, reducing analysis time by **30%**.
- Built a common persistence library using **Java, Spring Boot, and JPA**, eliminating **30%** dead code and optimizing database interactions.
- Designed and implemented the ASG Tool UI using **Angular, Jasmine & Karma**, achieving **98.04%** test accuracy and optimizing file organization for SOLR metadata management.
- Led Gradle (6.9 → 8.3) & Java (8 → 17) upgrades for three SDP listeners, ensuring security and maintainability.
- Created a SOLR aliases script in **Python** to analyze alias hierarchies across **80+** SOLR collections, enhancing data visibility.

University Projects

Bitcoin price prediction using Arima Model (Python , Google-Collab) **GitHub**

- Built a Bitcoin price prediction system using the **ARIMA model**, achieving **85%** accuracy.
- Analyzed 5 years of historical Bitcoin data from Yahoo Finance to identify trends and improve predictive accuracy.

Diabetic-retinopathy-detection (Python , Kaggle , TensorFlow , Keras API) **GitHub**

- Developed state-of-the-art deep learning models **(VGG19, DenseNet201, ResNet50)** for the detection of diabetic retinopathy.
- Applied data balancing techniques by augmenting and **upscaling to 1,000** images per category while **downscaling to 200 images**, optimizing the loss function for balanced weighted categorical entropy.
- Gained accuracies of **80% with DenseNet**, **65% with ResNet**, and **69% with VGG19**.

PUBLICATION AND RESEARCH

Enhancing Liver Cirrhosis Diagnosis – Comparative Analysis of XGBoost, SVM, and Random Forest Classifiers (Scopus Indexed) Linkedin

- Presented at the 4th International Conference on Computational Methods in Science & Technology, reaching an audience of 75+ researchers.

Volunteering Experience

Sports Day Event Volunteer (Masoom NGO)

- Volunteered with Masoom NGO's Night School Transformation Program, coordinating sports activities for 100+ adult learners. Managed event logistics to promote teamwork and support their educational journey.

AWARDS & HONORS

Dean’s List Award **Linkedin**

- Achieved an SGPA of 9.68, recognized for academic excellence.

Star Collaborator Recognition, Evalueserve **Linkedin**

- Recognized by reporting manager for exceptional support and collaboration during charge code creation.
